

sphere forebody, $M_\infty = 6$, fine mesh: where the max-Courant-0.2 limit cycle lives (NR-25)

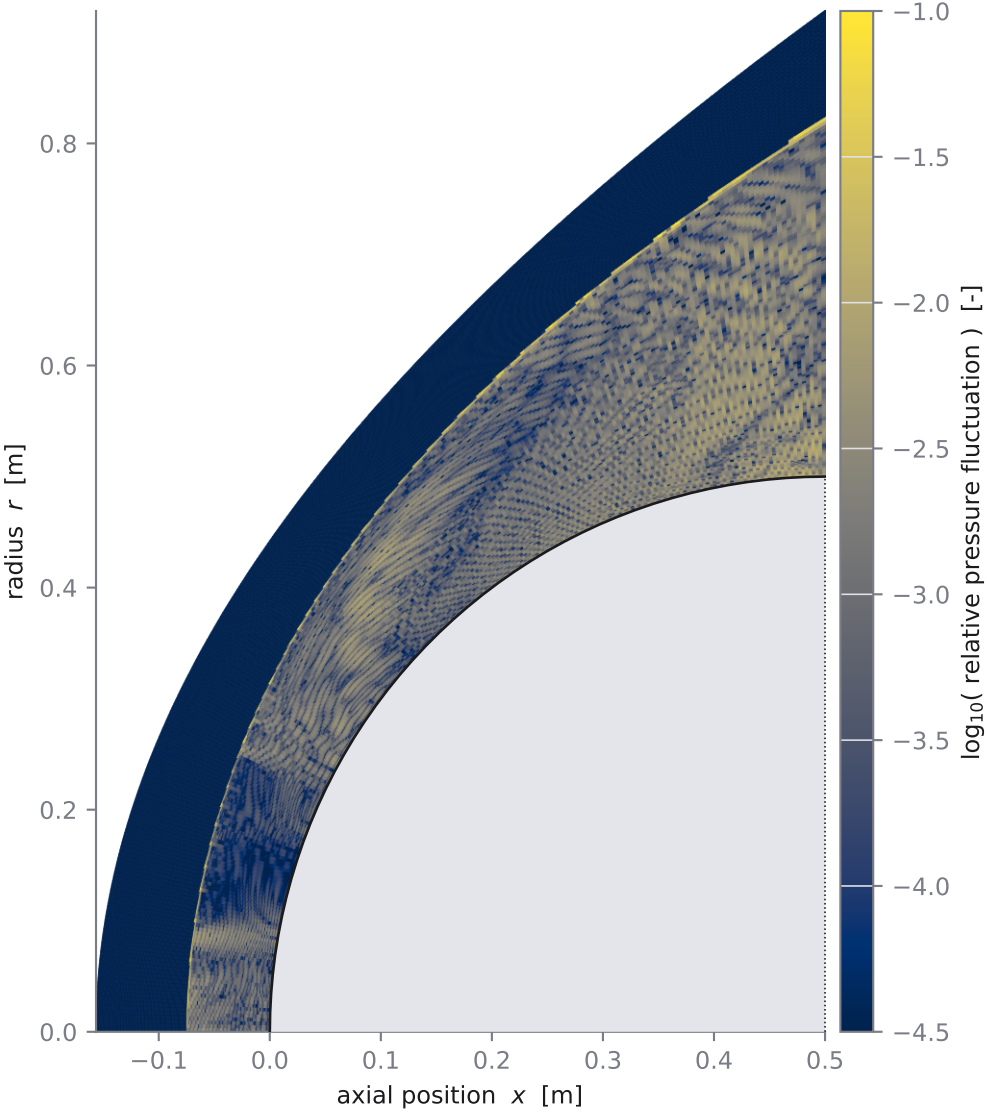

(a) sphere_M6_fine_cyclediag, max Co 0.2
rms of p over 100 snapshots, it 100,002–100,200 every 2
max $4.8\text{e-}02$ · median in the shock layer $4.2\text{e-}03$

(b) sphere_M6_fine, max Co 0.2
|p(it 100,000) – p(it 80,000)| / p, saved fields 20,000 it apart
max $1.1\text{e-}01$ · median in the shock layer $3.6\text{e-}03$

(c) sphere_M6_fine_Co0p1, max Co 0.1 (of record)
|p(it 110,000) – p(it 105,000)| / p, saved fields 5,000 it apart
max $1.2\text{e-}01$ · median in the shock layer $9.0\text{e-}04$

(d) sphere_M6_fine_Co0p1
p/p_∞ at it 110,000 (the field of record)
