

Assumed base drag as a share of total C_D (band = base-pressure band)

$C_{D,base} = (1 - p_b/p_{inf}) \cdot 2 / (\gamma M^2)$: an assumption, not CFD. Band: p_b/p_{inf} from 0 (exact vacuum limit) up to 1 ($M \leq 6$) ... 3 ($M \geq 10$, NASA TN D-4800 fig. 11b, read by eye). Negative = base pressure above freestream. Run M3-DP-20260920T1610Z. Gate G4 PASS at build and now (read from M2's gate file).
