

◆ adaptive policy (section 26) (n = 5)   
 ▲ greedy: promote the best (n = 5)   
 ✕ no new CFD (floor) (n = 5)   
 ● random promotion (n = 5)   
 ■ up-front space-filling CFD (n = 5)   
 - - target: 95% of the pooled-truth reference

AETHER M6 adaptive fidelity · run M6-AF-20260920T211148Z · F1 backend: openfoam

(a) Best truth hypervolume reached within a given number of CFD calls: mean over seeds (line), min-max over seeds (band); open markers are each seed's end point. READ WITH (b): calls are spent WHILE the search runs, so the rise of a promoting arm in (a) is search progress as well as CFD; an arm that buys nothing sits at 0 calls with its whole search behind it, an up-front arm at its full budget. Hypervolume is normalised to M4's fixed rectangle and scored under POOLED TRUTH, never under the arm's own surface.
